The edge of tomorrow.

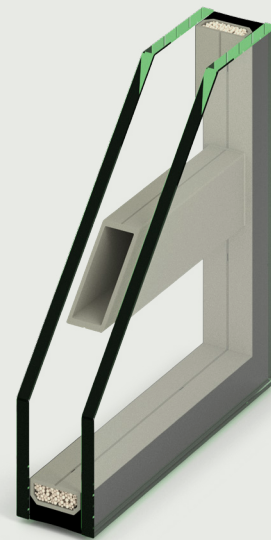

## SWISSPACER GEORGIAN BAR

# SWISSPACER GEORGIAN BAR

## Reducing heat loss, improving looks – SWISSPACER Georgian bars make it possible

SWISSPACER Georgian bars enable window fabricators to create high performance, authentic looking windows. Ideal for premium looking heritage-style windows and available in SWISSPACER's best-selling colours, the Georgian bar enhances the appearance of the window and gives outstanding energy performance.

## Often underestimated

A lot of users underestimate the negative effect of metal spacer bars in an insulating glass unit. An otherwise standard flat-rate mark-up of the U-value (according to EN 14351-1 by up to 0.3 W/m<sup>2</sup>K) is no longer necessary when using SWISSPACER Georgian bars. The bars are made of the same highly-insulating plastic as SWISSPACER spacer bars. This prevents a cold bridge in the insulating glass and maintains the window's high energy efficiency.

Unlike aluminium bars, thermally optimised Georgian bars from SWISSPACER only affect the U-value of the window slightly. Our energy-saving programme CALUWIN will help you make these calculations and show your customers the window's energy performance.

## 13 sizes to choose from

To meet growing demand for traditional looking windows, SWISSPACER added four new sizes to its range of Georgian bar spacer bars: with the introduction of 12 x 18 mm, 16 x 18 mm, 14 x 24 mm, 14 x 30 mm bars as well as the new Georgian bar cross with anti-rattle plug, SWISSPACER offers its customers not only a larger range to choose from, but also better processing possibilities.
